## BUTTERNUT SQUASH

Type	A small fruited butternut hybrid.
Maturity	80 – 90 days from sowing.
Plant Characteristics	A vining –type growth habit. Vigorous growth gives good leaf cover of fruit.
Fruit Characteristics	Small average fruit size, 0.8 to 1.1 Kg. Typical Waltham shape. Very good uniformity of both size and shape. Flesh is a deep orange when fully mature. Small blossom end scar and medium-sized seed cavity.
Diseases Resistance	Intermediate resistance to ZYMV.
Features and Benefits	Peta produces fruit of a size required by exporters and is also well-suited to small packs for the local market. Peta will give best results in summer plantings. When planted in winter production areas, fruit size is reduced to under 350g. Resistance to ZYMV reduces risk to growers.

\* Submitted for registration on the national variety list.
